

Adaptive Overlap Thresholding for OCGCN

(a) Global Thresholding

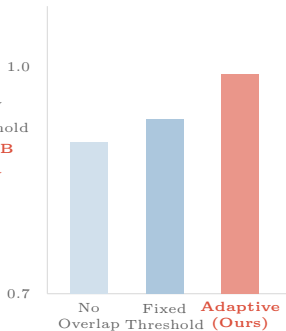

Fixed Threshold
same for all nodes

(b) Node-Specific Thresholds

Threshold adapts to node uncertainty:
High Ambiguity $\rightarrow$ Lower Threshold
Low Ambiguity $\rightarrow$ Higher Threshold

(c) F1 Improvement

Key insight: Instead of a fixed global rule, node ambiguity (uncertainty in community membership) determines overlap: **eliminating manual threshold tuning** while maintaining competitive performance.
